

Pre-Trip Inspection Challenge - Answer Key

Scenario #1:

Hydraulic hose leak – Active leaks can lead to failure and serious safety risks. Shut it down.

Scenario #2:

Backup alarm not working – Critical safety system. Machine should not operate until fixed.

Scenario #3:

Loose/missing track bolt – Can lead to component failure or track issues. Needs repair before use.

Scenario #4:

Hydraulic fluid significantly low – Risk of system damage and failure. Do not operate.

Scenario #5:

Hydraulic pressure warning light – Immediate red flag. Machine must be shut down and inspected.
