

# BONUS

## Bonus: How to Recover the Excavator?

Since we have a **bulldozer, wheel loader, motor grader, and dump truck**, the best recovery plan would be:

- 1 Use the bulldozer** (your machine) to push solid ground material around the excavator to provide traction.
- 2 Use the wheel loader** to scoop and remove excess mud.
- 3 Attach a tow chain to the dump truck or bulldozer** and carefully pull the excavator out while coordinating with its operator.
- 4 Use the motor grader** afterward to level the ground and prevent future equipment from getting stuck.

Would you have handled it differently? We'd like to hear about it. Send us a message through the [Contact Us](#) page with your strategy!
