True or False? Agriculture Edition Answer Key

1 – TRUE: Combines cut crops, separate grain and remove chaff.

2 – FALSE: Round balers make cylindrical bales; square balers make rectangular bales.

3 – TRUE: A tractor's three-point hitch connects and raises compatible implements.

4 – FALSE: A combine's header gathers and cuts crops. The grain tank stores harvested grain.

5 – TRUE: A PTO transfers tractor power to implements such as mowers and balers.

6 – FALSE: Hay must reach a suitable moisture level before baling, but it doesn't need to be completely dry.

7 – TRUE: Grain augers use a rotating screw to move grain through a tube.

8 – FALSE: Tractors are available with two-wheel drive, front-wheel assist or four-wheel drive.

9 – TRUE: Agricultural sprayers apply products such as herbicides, fungicides and insecticides.

10 – TRUE: A combine's grain tank temporarily holds harvested grain before unloading.
